## StartofDesignBuildingConstructionandConsolida tionof DesignFunctionsatNakaDivision

Movetobolstercompetitivenessviareformstoenha ncemanufacturingcapabilities

HitachiHigh-TechnologiesCorporation(TOKYO:8036, HitachiHigh-Tech)hasinitiatedconstructionofa new design building at the Naka Division (Hitachinaka-s hi, Ibaraki Prefecture), home to the Nanotechnology ProductsBusinessGroup.

Once the new seven-floor building is built, design with the manufacturing building built in May 2009, efficient production framework needed to stayinsy

functions will be consolidated within the division. Together this configuration will give Hitachi High-Tech the nchronization with a rapidly changing market environment.

The Naka Division is engaged primarily in the devel opment, design and manufacture of semiconductor metrology and inspection systems, electron microsco pes and medical systems. The new design building un der construction is a seven-floor, steel-framed structure operation systems and medical systems. The new design building un der construction is a seven-floor, steel-framed structure operation systems. Furthermore, the Naka Division is currently enactin g a set of reforms designed to enhance manufacturin g capabilities, and continues to take steps to minimi zeproductionleadtimes, reduce inventories, refor mlogistics withinthedivision, and improve production methods ,amongotheractions. The consolidation at the new design building of design functions formerly dispersed thr oughout the division is one such measure in this ar ea. By applying "Business Microscope®," (\*) a system from Hitachi High-Tech for organizational visualization, to analyzecommunication between engineers, the nutili zingtheresultstocarryoutfloordesign,forexa mple, we hope to put an environment in place that will allow engineers to better focus on design, thus raising the efficiencyandshorteningthetimerequiredfordev elopment

The construction of the design building is one comp onent of ongoing construction to refurbish and repl ace aging structures at the Naka Division that began with the start of construction in March 2008 of the manufacturing building (machine processing/medical system assembly), which completed in May 2009. The design building, as part of this sequence of work, represents the largest investment to date to outfit facilities at the Naka Division. Construction is scheduled to conclude in October 2011, coinciding with the tenth anniversary of Hitachi High-Tech.

Going forward, Hitachi High-Techis committed to continuing efforts to address manufacturing capabilities for its next decade in business.

[OverviewofNewBuilding]

<DesignBuilding(tentativename)>

Seven-floor, steel-framed structure

Totalfloorarea:approx.25,000squaremeters

Totalinvestment:approx.¥5billion
