

Hitachi High-Technologies and Digital Surf announce **new Hitachi map 3D software**

Dedicated software for Scanning Electron Microscope users

Tokyo, Japan & Besançon, France: the release of new **Hitachi map 3D software** based on Mountains® Technology opens up a new world of opportunities for researchers and industrial engineers using Hitachi High-Technologie's cutting-edge scanning electron microscopy (SEM) systems.

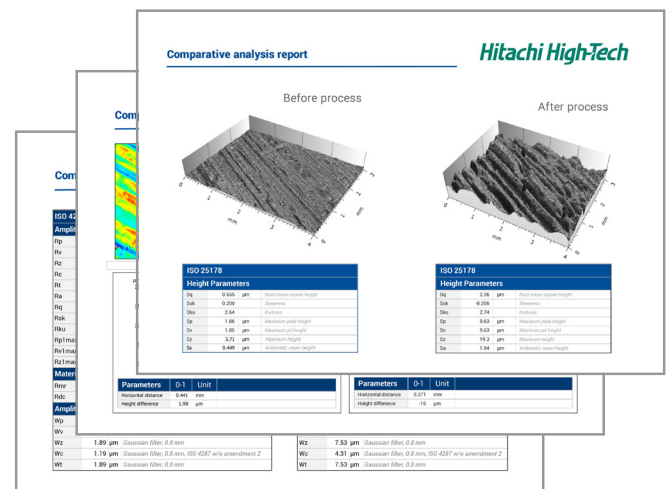

Thanks to the partnership between Hitachi High-Technologies and Digital Surf, users now have full access to a set of powerful tools for visualizing, analysing and reporting on their data. This includes:

- **Ultrafast 3D reconstruction of surface topography**
- **Image colorization and enhancement**
- **Topography measurements** including the volume of surface structures (bumps, holes), step heights, contour etc.
- **Characterization of surface roughness and texture** – advanced roughness/waviness filtering techniques – 2D and 3D parameters from Ra to ISO 25178.

Quick and easy report publication
Comparing metal processing

Available in 11 different languages, Hitachi map 3D also offers **easy-to-use automation tools** to speed up analysis. The interactive workflow allows full traceability and easy fine-tuning at any time in the analysis process.

Analysis reports can be exported in standard formats for publication (Excel, PDF and Word-compatible RTF). All images can be output at up to 1200 dpi for integration into posters and presentations.

Hitachi High-Tech

Hitachi High-Technologies Corporation is engaged in activities in a broad range of fields, including Science & Medical Systems, Electronic Device Systems, Industrial Systems and Advanced Industrial Products.
